

The future of **Non Communicable Diseases** prevention and control in Belgium

Laetitia Lempereur – Lieven De Raedt

NCDS

What's that?

Non Communicable Diseases

Non transmissible entre personnes

~~Non Communicable Diseases~~

Non Communicable Diseases

Noncommunicable diseases (NCDs), also known as chronic diseases, are not passed from person to person. They are of long duration and generally slow progression.

CDC

Noncommunicable diseases (NCDs), also known as chronic diseases, tend to be of long duration and are the result of a combination of genetic, physiological, environmental and behavioural factors.

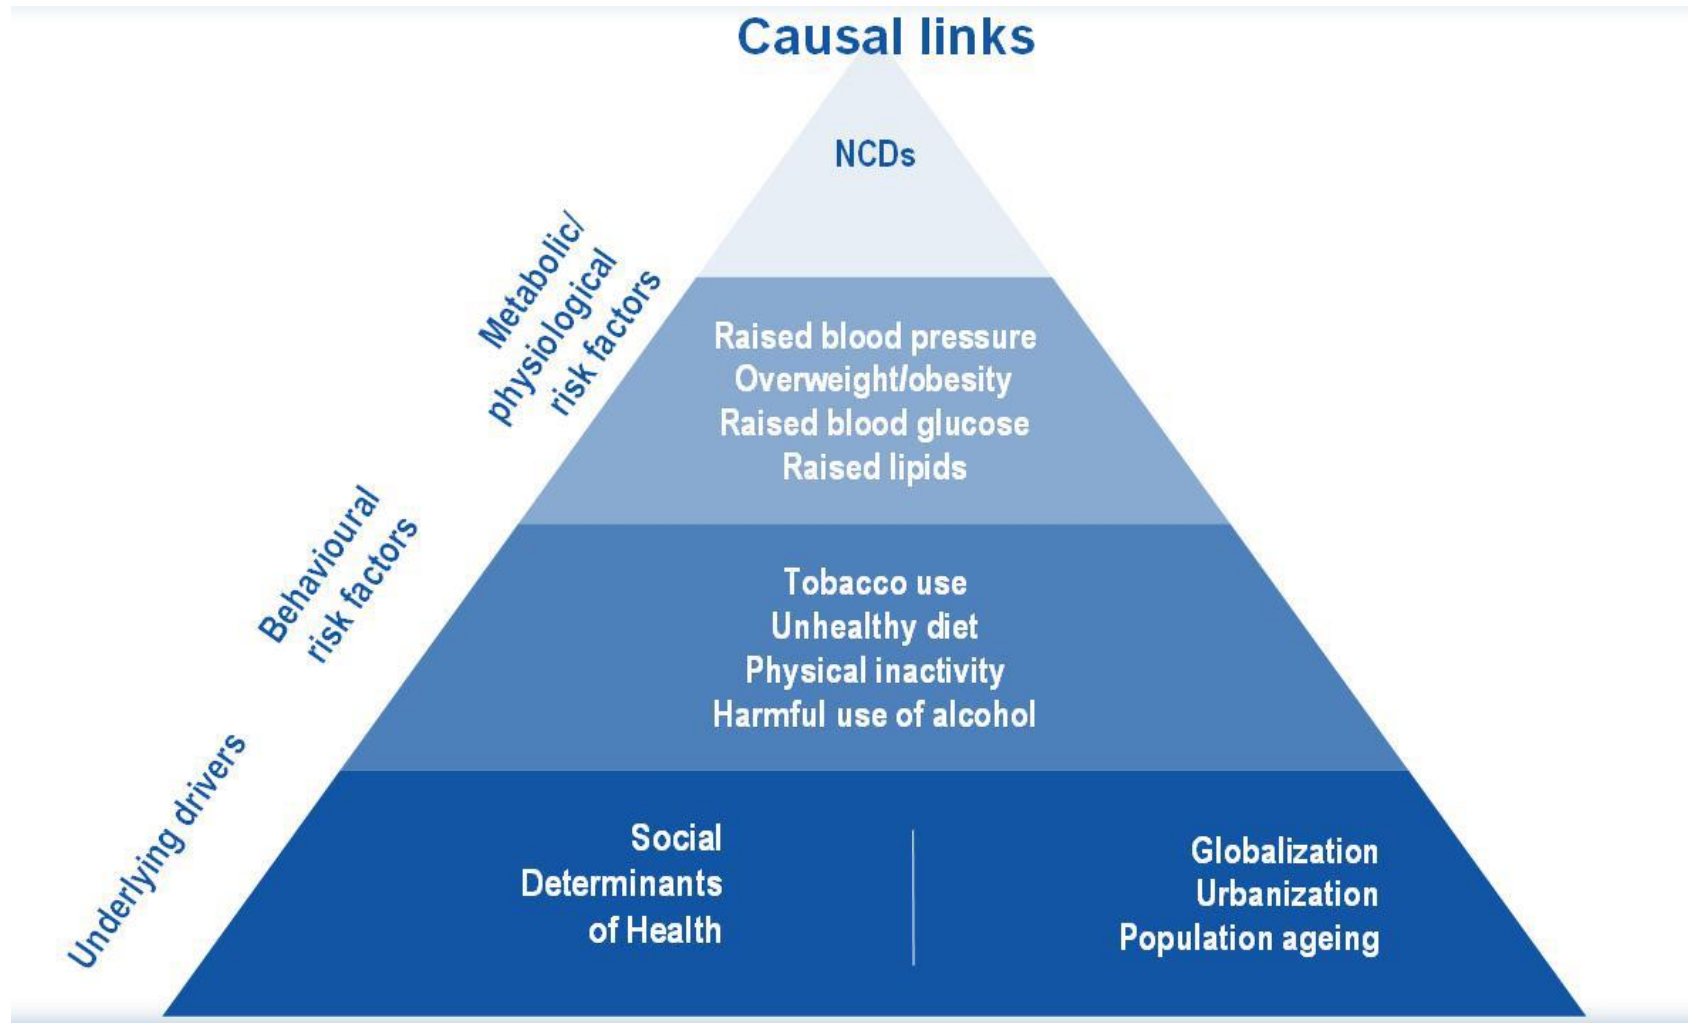

WHO

The term NCDs refers to a group of conditions that are not mainly caused by an acute infection, result in long-term health consequences and often create a need for long-term treatment and care.

What are we going to talk about today?

Causes sous-jacentes

5X5

DISEASES

Cardiovascular
Disease

Chronic Respiratory
Diseases

Cancer

Diabetes

Mental and
Neurological Conditions

RISK FACTORS

Unhealthy Diet

Tobacco Use

Harmful Use of
Alcohol

Physical Inactivity

Air Pollution

Non Communicable DiseaseS

“The Belgian federal government aims to **reduce**, by 2030, the **health gap** between those with the highest and lowest healthy life expectancy by at least 25%; the number of **avoidable deaths** by 15%; and to rejoin the top-ten European countries with the highest healthy life expectancy”

“There is also the intention of developing more detailed **health objectives** and a system to monitor the achievement of these objectives together with the federated entities in Belgium.”
